# SQL Practical Demonstrations

---

*A Comprehensive Guide with Queries, Outputs & Explanations*

Database Management Systems

Practical Exercises 0 – 6

April 2026

# Table of Contents

Practical 0: Database and Table Creation

Practical 1: WHERE Clause Operators

Practical 2: Aggregate Functions

Practical 3: String and Date Functions

Practical 4: GROUP BY and HAVING

Practical 5: LIKE and Wildcards

Practical 6: INNER JOIN

# Practical 0: Database and Table Creation

---

*Practical 0 focuses on creating a complete university database schema named 'prac0' with six interrelated tables: STUDENT, COURSE, ENROLLMENT, PROFESSOR, TEACHES, and SOCIETY. This practical demonstrates fundamental Data Definition Language (DDL) operations including database creation, table creation with appropriate data types, primary keys, foreign keys, check constraints, and composite keys. It also covers Data Manipulation Language (DML) operations with INSERT statements to populate all tables with sample data representing a small university ecosystem.*

## Database and Table Setup

```
CREATE DATABASE IF NOT EXISTS prac0;
USE prac0;

DROP TABLE IF EXISTS SOCIETY;
DROP TABLE IF EXISTS TEACHES;
DROP TABLE IF EXISTS PROFESSOR;
DROP TABLE IF EXISTS ENROLLMENT;
DROP TABLE IF EXISTS COURSE;
DROP TABLE IF EXISTS STUDENT;
```

### 1. STUDENT Table

```
CREATE TABLE STUDENT(
    StudentID INT PRIMARY KEY,
    Name VARCHAR(50),
    Email VARCHAR(50),
    Department VARCHAR(30),
    Year INT,
    DOB DATE
);

INSERT INTO STUDENT VALUES (10001, 'Aryan', 'aryan@gmail.com', 'CS', 2, '2006-11-05');
INSERT INTO STUDENT VALUES (10002, 'Shefali', 'shefali@gmail.com', 'BCOM', 2, '2006-08-15');
INSERT INTO STUDENT VALUES (10003, 'Roy', 'roy@gmail.com', 'PS', 2, '2006-02-14');
INSERT INTO STUDENT VALUES (10004, 'Bansal', 'bansal@gmail.com', 'BA', 2, '2006-11-22');
```

**Table 1 STUDENT Table Data**

| StudentID | Name    | Email             | Department | Year | DOB        |
|-----------|---------|-------------------|------------|------|------------|
| 10001     | Aryan   | aryan@gmail.com   | CS         | 2    | 2006-11-05 |
| 10002     | Shefali | shefali@gmail.com | BCOM       | 2    | 2006-08-15 |
| 10003     | Roy     | roy@gmail.com     | PS         | 2    | 2006-02-14 |
| 10004     | Bansal  | bansal@gmail.com  | BA         | 2    | 2006-11-22 |

## 2. COURSE Table

```
CREATE TABLE COURSE(
    CourseID INT PRIMARY KEY,
    Title VARCHAR(100),
    Credits INT,
    CourseType VARCHAR(20) CHECK (CourseType IN ('Fulltime', 'Parttime')),
    TotalSeats INT
);

INSERT INTO COURSE VALUES (101, 'CS', 24, 'Fulltime', 25);
INSERT INTO COURSE VALUES (102, 'BCOM', 24, 'Fulltime', 22);
INSERT INTO COURSE VALUES (103, 'PS', 24, 'Parttime', 45);
INSERT INTO COURSE VALUES (104, 'BA', 24, 'Parttime', 567);
```

**Table 2 COURSE Table Data**

| CourseID | Title | Credits | CourseType | TotalSeats |
|----------|-------|---------|------------|------------|
| 101      | CS    | 24      | Fulltime   | 25         |
| 102      | BCOM  | 24      | Fulltime   | 22         |
| 103      | PS    | 24      | Parttime   | 45         |
| 104      | BA    | 24      | Parttime   | 567        |

### 3. ENROLLMENT Table

```
CREATE TABLE ENROLLMENT(
    EnrollID INT PRIMARY KEY,
    StudentID INT,
    CourseID INT,
    DateOfAdmission DATE,
    Grade CHAR(2),
    FOREIGN KEY(StudentID) REFERENCES STUDENT(StudentID),
    FOREIGN KEY(CourseID) REFERENCES COURSE(CourseID)
);

INSERT INTO ENROLLMENT VALUES (20001, 10001, 101, '2024-08-01', 'O');
INSERT INTO ENROLLMENT VALUES (20002, 10002, 102, '2024-08-01', 'A+');
INSERT INTO ENROLLMENT VALUES (20003, 10003, 103, '2024-08-01', 'A');
INSERT INTO ENROLLMENT VALUES (20004, 10004, 104, '2024-08-01', 'A-');
```

**Table 3 ENROLLMENT Table Data**

| EnrollID | StudentID | CourseID | DateOfAdmission | Grade |
|----------|-----------|----------|-----------------|-------|
| 20001    | 10001     | 101      | 2024-08-01      | O     |
| 20002    | 10002     | 102      | 2024-08-01      | A+    |
| 20003    | 10003     | 103      | 2024-08-01      | A     |
| 20004    | 10004     | 104      | 2024-08-01      | A-    |

### 4. PROFESSOR Table

```
CREATE TABLE PROFESSOR(
    ProfID INT PRIMARY KEY,
    Name VARCHAR(50),
    Department VARCHAR(30),
    Email VARCHAR(50)
);

INSERT INTO PROFESSOR VALUES (301, 'Dr. Sharma', 'CS', 'sharma@example.com');
INSERT INTO PROFESSOR VALUES (302, 'Dr. Verma', 'BCOM', 'verma@example.com');
INSERT INTO PROFESSOR VALUES (303, 'Dr. Gupta', 'PS', 'gupta@example.com');
INSERT INTO PROFESSOR VALUES (304, 'Dr. Singh', 'BA', 'singh@example.com');
```

**Table 4 PROFESSOR Table Data**

| ProfID | Name       | Department | Email              |
|--------|------------|------------|--------------------|
| 301    | Dr. Sharma | CS         | sharma@example.com |
| 302    | Dr. Verma  | BCOM       | verma@example.com  |
| 303    | Dr. Gupta  | PS         | gupta@example.com  |
| 304    | Dr. Singh  | BA         | singh@example.com  |

**5. TEACHES Table**

```

CREATE TABLE TEACHES(
    ProfID INT,
    CourseID INT,
    Semester VARCHAR(10),
    Year INT,
    PRIMARY KEY(ProfID, CourseID, Semester, Year),
    FOREIGN KEY(ProfID) REFERENCES PROFESSOR(ProfID),
    FOREIGN KEY(CourseID) REFERENCES COURSE(CourseID)
);

INSERT INTO TEACHES VALUES (301, 101, 'Fall', 2024);
INSERT INTO TEACHES VALUES (302, 102, 'Fall', 2024);
INSERT INTO TEACHES VALUES (303, 103, 'Spring', 2024);
INSERT INTO TEACHES VALUES (304, 104, 'Spring', 2024);

```

**Table 5 TEACHES Table Data**

| ProfID | CourseID | Semester | Year |
|--------|----------|----------|------|
| 301    | 101      | Fall     | 2024 |
| 302    | 102      | Fall     | 2024 |
| 303    | 103      | Spring   | 2024 |
| 304    | 104      | Spring   | 2024 |

## 6. SOCIETY Table

```
CREATE TABLE SOCIETY(
    SocID INT PRIMARY KEY,
    SocName VARCHAR(50),
    FacultyInCharge VARCHAR(50)
);

INSERT INTO SOCIETY VALUES (401, 'Coding Club', 'Dr. Sharma');
INSERT INTO SOCIETY VALUES (402, 'Commerce Society', 'Dr. Verma');
INSERT INTO SOCIETY VALUES (403, 'Debate Society', 'Dr. Gupta');
INSERT INTO SOCIETY VALUES (404, 'Cultural Society', 'Dr. Singh');
```

**Table 6 SOCIETY Table Data**

| SocID | SocName          | FacultyInCharge |
|-------|------------------|-----------------|
| 401   | Coding Club      | Dr. Sharma      |
| 402   | Commerce Society | Dr. Verma       |
| 403   | Debate Society   | Dr. Gupta       |
| 404   | Cultural Society | Dr. Singh       |

**Note:** This practical establishes the foundation schema that subsequent practicals build upon. The tables demonstrate various constraint types including PRIMARY KEY, FOREIGN KEY, CHECK, and composite keys.

# Practical 1: WHERE Clause Operators

*Practical 1 demonstrates the use of various SQL comparison and logical operators within the WHERE clause to filter records from a single table. It covers equality conditions (=), range comparisons (>, <=, BETWEEN), pattern matching (LIKE), logical combinations (AND, OR, NOT), set membership (IN), and date comparisons. These operators form the foundation of data retrieval in SQL, allowing precise record selection based on business requirements.*

## Table Setup

```
CREATE DATABASE IF NOT EXISTS prac1;
USE prac1;

DROP TABLE IF EXISTS employees;
CREATE TABLE employees(
    emp_id INT,
    first_name VARCHAR(30),
    last_name VARCHAR(30),
    department VARCHAR(20),
    salary INT,
    hire_date DATE
);

INSERT INTO employees VALUES (101, 'Rahul', 'Sharma', 'Sales', 45000, '2020-01-15');
INSERT INTO employees VALUES (102, 'Priya', 'Mehta', 'HR', 55000, '2019-03-12');
INSERT INTO employees VALUES (103, 'Amit', 'Verma', 'IT', 60000, '2021-06-01');
INSERT INTO employees VALUES (104, 'Neha', 'Kapoor', 'Sales', 48000, '2022-07-10');
INSERT INTO employees VALUES (105, 'Karan', 'Singh', 'Finance', 52000, '2020-11-23');
```

**Table 7 EMPLOYEES Table Data**

| emp_id | first_name | last_name | department | salary | hire_date  |
|--------|------------|-----------|------------|--------|------------|
| 101    | Rahul      | Sharma    | Sales      | 45000  | 2020-01-15 |
| 102    | Priya      | Mehta     | HR         | 55000  | 2019-03-12 |
| 103    | Amit       | Verma     | IT         | 60000  | 2021-06-01 |
| 104    | Neha       | Kapoor    | Sales      | 48000  | 2022-07-10 |
| 105    | Karan      | Singh     | Finance    | 52000  | 2020-11-23 |

## Queries and Outputs

### Query 1: Equality condition (=)

```
SELECT *  
FROM employees  
WHERE department = 'Sales';
```

#### Output:

| emp_id | first_name | last_name | department | salary | hire_date  |
|--------|------------|-----------|------------|--------|------------|
| 101    | Rahul      | Sharma    | Sales      | 45000  | 2020-01-15 |
| 104    | Neha       | Kapoor    | Sales      | 48000  | 2022-07-10 |

### Query 2: Greater than (>)

```
SELECT first_name, salary  
FROM employees  
WHERE salary > 50000;
```

#### Output:

| first_name | salary |
|------------|--------|
| Priya      | 55000  |
| Amit       | 60000  |
| Karan      | 52000  |

### Query 3: Less than or equal to (<=)

```
SELECT first_name, department, salary  
FROM employees  
WHERE salary <= 48000;
```

#### Output:

| first_name | department | salary |
|------------|------------|--------|
| Rahul      | Sales      | 45000  |
| Neha       | Sales      | 48000  |

#### Query 4: Range with BETWEEN

```
SELECT first_name, salary
FROM employees
WHERE salary BETWEEN 45000 AND 55000;
```

#### Output:

| first_name | salary |
|------------|--------|
| Rahul      | 45000  |
| Priya      | 55000  |
| Neha       | 48000  |
| Karan      | 52000  |

#### Query 5: Pattern matching with LIKE

```
SELECT first_name, last_name
FROM employees
WHERE first_name LIKE 'P%';
```

#### Output:

| first_name | last_name |
|------------|-----------|
| Priya      | Mehta     |

#### Query 6: Logical AND

```
SELECT *
FROM employees
WHERE department = 'Sales' AND salary > 46000;
```

#### Output:

| emp_id | first_name | last_name | department | salary | hire_date  |
|--------|------------|-----------|------------|--------|------------|
| 104    | Neha       | Kapoor    | Sales      | 48000  | 2022-07-10 |

**Query 7: Logical OR**

```
SELECT *
FROM employees
WHERE department = 'IT' OR department = 'Finance';
```

**Output:**

| emp_id | first_name | last_name | department | salary | hire_date  |
|--------|------------|-----------|------------|--------|------------|
| 103    | Amit       | Verma     | IT         | 60000  | 2021-06-01 |
| 105    | Karan      | Singh     | Finance    | 52000  | 2020-11-23 |

**Query 8: NOT operator**

```
SELECT first_name, department
FROM employees
WHERE NOT department = 'HR';
```

**Output:**

| first_name | department |
|------------|------------|
| Rahul      | Sales      |
| Amit       | IT         |
| Neha       | Sales      |
| Karan      | Finance    |

**Query 9: Date condition**

```
SELECT first_name, hire_date
FROM employees
WHERE hire_date > '2020-12-31';
```

**Output:**

| first_name | hire_date  |
|------------|------------|
| Amit       | 2021-06-01 |
| Neha       | 2022-07-10 |

### Query 10: IN operator

```
SELECT first_name, department
FROM employees
WHERE department IN ('Sales', 'Finance');
```

### Output:

| first_name | department |
|------------|------------|
| Rahul      | Sales      |
| Neha       | Sales      |
| Karan      | Finance    |

## Practical 2: Aggregate Functions

Practical 2 explores SQL aggregate functions which perform calculations on multiple rows and return a single value. It demonstrates `COUNT(*)` for row counting, `AVG()` for computing averages, `MAX()` and `MIN()` for finding extremes, and `SUM()` for totaling values. The practical also introduces the `GROUP BY` clause for grouping results by categories (such as department) and the `HAVING` clause for filtering grouped results. These functions are essential for data analysis and reporting tasks, enabling summarization of large datasets into meaningful metrics.

### Table Setup

This practical uses the `employees` table from Practical 1 (database `prac2`).

**Table 8 EMPLOYEES Table Data**

| emp_id | first_name | last_name | department | salary | hire_date  |
|--------|------------|-----------|------------|--------|------------|
| 101    | Rahul      | Sharma    | Sales      | 45000  | 2020-01-15 |
| 102    | Priya      | Mehta     | HR         | 55000  | 2019-03-12 |
| 103    | Amit       | Verma     | IT         | 60000  | 2021-06-01 |
| 104    | Neha       | Kapoor    | Sales      | 48000  | 2022-07-10 |
| 105    | Karan      | Singh     | Finance    | 52000  | 2020-11-23 |

### Queries and Outputs

#### Query 1: Count all employees

```
SELECT COUNT(*) AS total_employees
FROM employees;
```

#### Output:

| total_employees |
|-----------------|
| 5               |

### Query 2: Average salary

```
SELECT AVG(salary) AS avg_salary  
FROM employees;
```

#### Output:

| avg_salary |
|------------|
| 52000.0000 |

### Query 3: Maximum salary

```
SELECT MAX(salary) AS highest_salary  
FROM employees;
```

#### Output:

| highest_salary |
|----------------|
| 60000          |

### Query 4: Minimum salary

```
SELECT MIN(salary) AS lowest_salary  
FROM employees;
```

#### Output:

| lowest_salary |
|---------------|
| 45000         |

### Query 5: Sum of all salaries

```
SELECT SUM(salary) AS total_salary  
FROM employees;
```

#### Output:

| total_salary |
|--------------|
| 260000       |

**Query 6: Count employees in Sales department**

```
SELECT COUNT(*) AS sales_count
FROM employees
WHERE department = 'Sales';
```

**Output:**

| sales_count |
|-------------|
| 2           |

**Query 7: Average salary by department**

```
SELECT department, AVG(salary) AS avg_salary
FROM employees
GROUP BY department;
```

**Output:**

| department | avg_salary |
|------------|------------|
| Finance    | 52000.0    |
| HR         | 55000.0    |
| IT         | 60000.0    |
| Sales      | 46500.0    |

**Query 8: Maximum salary by department**

```
SELECT department, MAX(salary) AS max_salary
FROM employees
GROUP BY department;
```

**Output:**

| department | max_salary |
|------------|------------|
| Finance    | 52000      |
| HR         | 55000      |
| IT         | 60000      |
| Sales      | 48000      |

### Query 9: Departments having more than 1 employee (HAVING)

```
SELECT department, COUNT(*) AS emp_count
FROM employees
GROUP BY department
HAVING COUNT(*) > 1;
```

#### Output:

| department | emp_count |
|------------|-----------|
| Sales      | 2         |

### Query 10: Total salary of employees hired after 2020

```
SELECT SUM(salary) AS total_salary
FROM employees
WHERE hire_date > '2020-12-31';
```

#### Output:

| total_salary |
|--------------|
| 108000       |

# Practical 3: String and Date Functions

Practical 3 covers essential MySQL built-in functions for string manipulation and date/time operations. String functions include `UPPER()` and `LOWER()` for case conversion, `LENGTH()` for character counting, `CONCAT()` for string concatenation, `LEFT()` for substring extraction, and `REPLACE()` for text substitution. Date functions demonstrate `YEAR()` and `MONTH()` extraction, `CURDATE()` for current date retrieval, `TIMESTAMPDIFF()` for date difference calculations, `DATE_ADD()` for date arithmetic, and `DATEDIFF()` for day counting. These functions are crucial for formatting, transforming, and analyzing temporal and textual data in real-world applications.

## Table Setup

This practical uses the `employees` table from the `prac2` database.

Table 9 EMPLOYEES Table Data

| emp_id | first_name | last_name | department | salary | hire_date  |
|--------|------------|-----------|------------|--------|------------|
| 101    | Rahul      | Sharma    | Sales      | 45000  | 2020-01-15 |
| 102    | Priya      | Mehta     | HR         | 55000  | 2019-03-12 |
| 103    | Amit       | Verma     | IT         | 60000  | 2021-06-01 |
| 104    | Neha       | Kapoor    | Sales      | 48000  | 2022-07-10 |
| 105    | Karan      | Singh     | Finance    | 52000  | 2020-11-23 |

## Queries and Outputs

### Query 1: Convert names to uppercase

```
SELECT UPPER(`first_name`) AS `FirstName_Upper`  
FROM `employees`;
```

#### Output:

| FirstName_Upper |
|-----------------|
| RAHUL           |
| PRIYA           |
| AMIT            |
| NEHA            |
| KARAN           |

### Query 2: Convert last names to lowercase

```
SELECT LOWER(`last_name`) AS `LastName_Lower`  
FROM `employees`;
```

#### Output:

| LastName_Lower |
|----------------|
| sharma         |
| mehta          |
| verma          |
| kapoor         |
| singh          |

**Query 3: Find length of first names**

```
SELECT `first_name`, LENGTH(`first_name`) AS `Name_Length`  
FROM `employees`;
```

**Output:**

| first_name | Name_Length |
|------------|-------------|
| Rahul      | 5           |
| Priya      | 5           |
| Amit       | 4           |
| Neha       | 4           |
| Karan      | 5           |

**Query 4: Concatenate first and last names**

```
SELECT CONCAT(`first_name`, ' ', `last_name`) AS `Full_Name`  
FROM `employees`;
```

**Output:**

| Full_Name    |
|--------------|
| Rahul Sharma |
| Priya Mehta  |
| Amit Verma   |
| Neha Kapoor  |
| Karan Singh  |

### Query 5: Extract first 3 letters of first name

```
SELECT LEFT(`first_name`, 3) AS `ShortName`  
FROM `employees`;
```

#### Output:

| ShortName |
|-----------|
| Rah       |
| Pri       |
| Ami       |
| Neh       |
| Kar       |

### Query 6: Replace department name

```
SELECT REPLACE(`department`, 'Sales', 'Marketing') AS `Updated_Department`  
FROM `employees`;
```

#### Output:

| Updated_Department |
|--------------------|
| Marketing          |
| HR                 |
| IT                 |
| Marketing          |
| Finance            |

**Query 7: Extract year from hire date**

```
SELECT `first_name`, YEAR(`hire_date`) AS `Hire_Year`
FROM `employees`;
```

**Output:**

| first_name | Hire_Year |
|------------|-----------|
| Rahul      | 2020      |
| Priya      | 2019      |
| Amit       | 2021      |
| Neha       | 2022      |
| Karan      | 2020      |

**Query 8: Extract month from hire date**

```
SELECT `first_name`, MONTH(`hire_date`) AS `Hire_Month`
FROM `employees`;
```

**Output:**

| first_name | Hire_Month |
|------------|------------|
| Rahul      | 1          |
| Priya      | 3          |
| Amit       | 6          |
| Neha       | 7          |
| Karan      | 11         |

**Query 9: Current date**

```
SELECT CURDATE() AS `Today`;
```

**Output:**

| Today      |
|------------|
| 2026-04-29 |

**Query 10: Calculate years of service**

```
SELECT    `first_name`,    TIMESTAMPDIFF(YEAR,    `hire_date`,    CURDATE())    AS
`Years_of_Service`
FROM `employees`;
```

**Output:**

| first_name | Years_of_Service |
|------------|------------------|
| Rahul      | 6                |
| Priya      | 7                |
| Amit       | 4                |
| Neha       | 3                |
| Karan      | 5                |

**Query 11: Add 6 months to hire date (probation end)**

```
SELECT `first_name`, DATE_ADD(`hire_date`, INTERVAL 6 MONTH) AS `Probation_End`
FROM `employees`;
```

**Output:**

| first_name | Probation_End |
|------------|---------------|
| Rahul      | 2020-07-15    |
| Priya      | 2019-09-12    |
| Amit       | 2021-12-01    |
| Neha       | 2023-01-10    |
| Karan      | 2021-05-23    |

**Query 12: Difference in days since hire date**

```
SELECT `first_name`, DATEDIFF(CURDATE(), `hire_date`) AS `Days_Since_Hire`  
FROM `employees`;
```

**Output:**

| first_name | Days_Since_Hire |
|------------|-----------------|
| Rahul      | 2296            |
| Priya      | 2605            |
| Amit       | 1793            |
| Neha       | 1389            |
| Karan      | 1983            |

## Practical 4: GROUP BY and HAVING

---

*Practical 4 provides an in-depth exploration of the GROUP BY and HAVING clauses for data aggregation and filtering. It begins with basic GROUP BY operations computing averages per department, then advances to multi-column grouping, and finally introduces HAVING for filtering aggregated results. The practical demonstrates counting employees, computing averages, maximums, minimums, and sums by department. It also covers grouping by derived values (YEAR of hire\_date), combining WHERE with GROUP BY, and using multiple aggregate functions in a single query. These techniques are fundamental for producing summary reports and analytical dashboards.*

## Table Setup

```
CREATE DATABASE IF NOT EXISTS prac4;
USE prac4;

DROP TABLE IF EXISTS employees;
CREATE TABLE employees(
    emp_id INT,
    first_name VARCHAR(30),
    department VARCHAR(20),
    salary INT
);

INSERT INTO employees VALUES (101, 'Rahul', 'Sales', 45000);
INSERT INTO employees VALUES (102, 'Priya', 'HR', 55000);
INSERT INTO employees VALUES (103, 'Amit', 'IT', 60000);
INSERT INTO employees VALUES (104, 'Neha', 'Sales', 48000);
INSERT INTO employees VALUES (105, 'Karan', 'Finance', 52000);

CREATE TABLE employee_1(
    emp_id INT,
    first_name VARCHAR(30),
    last_name VARCHAR(30),
    department VARCHAR(20),
    salary INT,
    hire_date DATE
);

INSERT INTO employees_1 VALUES (101, 'Rahul', 'Sharma', 'Sales', 45000, '2020-01-15');
INSERT INTO employees_1 VALUES (102, 'Priya', 'Mehta', 'HR', 55000, '2019-03-12');
INSERT INTO employees_1 VALUES (103, 'Amit', 'Verma', 'IT', 60000, '2021-06-01');
INSERT INTO employees_1 VALUES (104, 'Neha', 'Kapoor', 'Sales', 48000, '2022-07-10');
INSERT INTO employees_1 VALUES (105, 'Karan', 'Singh', 'Finance', 52000, '2020-11-23');
INSERT INTO employees_1 VALUES (106, 'Anjali', 'Rao', 'IT', 62000, '2021-02-20');
INSERT INTO employees_1 VALUES (107, 'Rohan', 'Das', 'HR', 53000, '2018-08-25');
```

**Table 10 EMPLOYEES Table Data**

| emp_id | first_name | department | salary |
|--------|------------|------------|--------|
| 101    | Rahul      | Sales      | 45000  |
| 102    | Priya      | HR         | 55000  |
| 103    | Amit       | IT         | 60000  |
| 104    | Neha       | Sales      | 48000  |
| 105    | Karan      | Finance    | 52000  |

**Table 11 EMPLOYEES\_1 Table Data**

| emp_id | first_name | last_name | department | salary | hire_date  |
|--------|------------|-----------|------------|--------|------------|
| 101    | Rahul      | Sharma    | Sales      | 45000  | 2020-01-15 |
| 102    | Priya      | Mehta     | HR         | 55000  | 2019-03-12 |
| 103    | Amit       | Verma     | IT         | 60000  | 2021-06-01 |
| 104    | Neha       | Kapoor    | Sales      | 48000  | 2022-07-10 |
| 105    | Karan      | Singh     | Finance    | 52000  | 2020-11-23 |
| 106    | Anjali     | Rao       | IT         | 62000  | 2021-02-20 |
| 107    | Rohan      | Das       | HR         | 53000  | 2018-08-25 |

## Queries and Outputs

### Query 1: Average salary by department

```
SELECT department, AVG(salary) AS avg_salary
FROM employees
GROUP BY department;
```

#### Output:

| department | avg_salary |
|------------|------------|
| Finance    | 52000.0    |
| HR         | 55000.0    |
| IT         | 60000.0    |
| Sales      | 46500.0    |

### Query 2: Group by multiple columns (department and hire year)

```
SELECT department, hire_year, COUNT(*) AS emp_count
FROM employees
GROUP BY department, hire_year;
```

#### Output:

| department | hire_year | emp_count |
|------------|-----------|-----------|
| Finance    | 2020      | 1         |
| HR         | 2018      | 1         |
| HR         | 2019      | 1         |
| IT         | 2021      | 2         |
| Sales      | 2020      | 1         |
| Sales      | 2022      | 1         |

### Query 3: GROUP BY with HAVING (departments with more than 1 employee)

```
SELECT department, COUNT(*) AS emp_count
FROM employees
GROUP BY department
HAVING COUNT(*) > 1;
```

#### Output:

| department | emp_count |
|------------|-----------|
| Sales      | 2         |

### Query 4: Count employees in each department

```
SELECT department, COUNT(*) AS emp_count
FROM employees
GROUP BY department;
```

#### Output:

| department | emp_count |
|------------|-----------|
| Finance    | 1         |
| HR         | 1         |
| IT         | 1         |
| Sales      | 2         |

**Query 5: Average salary by department**

```
SELECT department, AVG(salary) AS avg_salary
FROM employees
GROUP BY department;
```

**Output:**

| department | avg_salary |
|------------|------------|
| Finance    | 52000.0    |
| HR         | 55000.0    |
| IT         | 60000.0    |
| Sales      | 46500.0    |

**Query 6: Maximum salary in each department**

```
SELECT department, MAX(salary) AS max_salary
FROM employees
GROUP BY department;
```

**Output:**

| department | max_salary |
|------------|------------|
| Finance    | 52000      |
| HR         | 55000      |
| IT         | 60000      |
| Sales      | 48000      |

### Query 7: Minimum salary in each department

```
SELECT department, MIN(salary) AS min_salary
FROM employees
GROUP BY department;
```

#### Output:

| department | min_salary |
|------------|------------|
| Finance    | 52000      |
| HR         | 55000      |
| IT         | 60000      |
| Sales      | 45000      |

### Query 8: Total salary by department

```
SELECT department, SUM(salary) AS total_salary
FROM employees
GROUP BY department;
```

#### Output:

| department | total_salary |
|------------|--------------|
| Finance    | 52000        |
| HR         | 55000        |
| IT         | 60000        |
| Sales      | 93000        |

### Query 9: Departments with more than 1 employee

```
SELECT department, COUNT(*) AS emp_count
FROM employees
GROUP BY department
HAVING COUNT(*) > 1;
```

#### Output:

| department | emp_count |
|------------|-----------|
| Sales      | 2         |

### Query 10: Count employees by year of hire

```
SELECT YEAR(hire_date) AS hire_year, COUNT(*) AS emp_count
FROM employees
GROUP BY hire_year;
```

#### Output:

| hire_year | emp_count |
|-----------|-----------|
| 2018      | 1         |
| 2019      | 1         |
| 2020      | 2         |
| 2021      | 2         |
| 2022      | 1         |

**Query 11: Average salary by department for employees hired after 2020**

```
SELECT department, AVG(salary) AS avg_salary
FROM employees
WHERE hire_date > '2020-12-31'
GROUP BY department;
```

**Output:**

| department | avg_salary |
|------------|------------|
| IT         | 61000.0    |
| Sales      | 48000.0    |

**Query 12: Departments and years having more than 1 employee**

```
SELECT department, YEAR(hire_date) AS hire_year, COUNT(*) AS emp_count
FROM employees
GROUP BY department, YEAR(hire_date)
HAVING COUNT(*) > 1;
```

**Output:**

| department | hire_year | emp_count |
|------------|-----------|-----------|
| IT         | 2021      | 2         |

**Query 13: Total salary and average salary by department**

```
SELECT department, SUM(salary) AS total_salary, AVG(salary) AS avg_salary
FROM employees
GROUP BY department;
```

**Output:**

| department | total_salary | avg_salary |
|------------|--------------|------------|
| Finance    | 52000        | 52000.0    |
| HR         | 55000        | 55000.0    |
| IT         | 60000        | 60000.0    |
| Sales      | 93000        | 46500.0    |

## Practical 5: LIKE and Wildcards

*Practical 5 demonstrates pattern matching using the LIKE operator and wildcard characters in SQL. The percent (%) wildcard matches zero or more characters, while the underscore (\_) wildcard matches exactly one character. This practical covers queries for finding names starting with specific letters, ending with particular characters, containing substrings, having characters at specific positions, and their negations using NOT LIKE. Additional queries explore practical patterns such as filtering by last name initials, excluding departments, and combining multiple pattern conditions.*

### Table Setup

```
CREATE DATABASE IF NOT EXISTS prac5;
USE prac5;

DROP TABLE IF EXISTS Employees;
CREATE TABLE Employees(
    EmpID INT,
    EmpName VARCHAR(50),
    Department VARCHAR(20),
    City VARCHAR(30)
);

INSERT INTO Employees VALUES(1, 'Amit Sharma', 'HR', 'Delhi');
INSERT INTO Employees VALUES(2, 'Ravi Kumar', 'IT', 'Mumbai');
INSERT INTO Employees VALUES(3, 'Anita Verma', 'Finance', 'Pune');
INSERT INTO Employees VALUES(4, 'Reena Kapoor', 'IT', 'Delhi');
INSERT INTO Employees VALUES(5, 'Aman Gupta', 'Admin', 'Chennai');
INSERT INTO Employees VALUES(6, 'Rohit Singh', 'Finance', 'Kolkata');
```

**Table 12 Employees Table Data**

| EmpID | EmpName      | Department | City    |
|-------|--------------|------------|---------|
| 1     | Amit Sharma  | HR         | Delhi   |
| 2     | Ravi Kumar   | IT         | Mumbai  |
| 3     | Anita Verma  | Finance    | Pune    |
| 4     | Reena Kapoor | IT         | Delhi   |
| 5     | Aman Gupta   | Admin      | Chennai |
| 6     | Rohit Singh  | Finance    | Kolkata |

## Queries and Outputs

### Core LIKE Queries

#### Query 1: Display employees whose name starts with 'A'

```
SELECT * FROM Employees WHERE EmpName LIKE 'A%';
```

#### Output:

| EmpID | EmpName     | Department | City    |
|-------|-------------|------------|---------|
| 1     | Amit Sharma | HR         | Delhi   |
| 3     | Anita Verma | Finance    | Pune    |
| 5     | Aman Gupta  | Admin      | Chennai |

#### Query 2: Display employees whose city ends with 'i'

```
SELECT * FROM Employees WHERE City LIKE '%i';
```

#### Output:

| EmpID | EmpName      | Department | City    |
|-------|--------------|------------|---------|
| 1     | Amit Sharma  | HR         | Delhi   |
| 2     | Ravi Kumar   | IT         | Mumbai  |
| 4     | Reena Kapoor | IT         | Delhi   |
| 5     | Aman Gupta   | Admin      | Chennai |

**Query 3: Display employees whose department contains the letter 'i'**

```
SELECT * FROM Employees WHERE Department LIKE '%i%';
```

**Output:**

| EmpID | EmpName      | Department | City    |
|-------|--------------|------------|---------|
| 2     | Ravi Kumar   | IT         | Mumbai  |
| 3     | Anita Verma  | Finance    | Pune    |
| 4     | Reena Kapoor | IT         | Delhi   |
| 5     | Aman Gupta   | Admin      | Chennai |
| 6     | Rohit Singh  | Finance    | Kolkata |

**Query 4: Display employees whose name has 'a' as the second character**

```
SELECT * FROM Employees WHERE EmpName LIKE '_a%';
```

**Output:**

| EmpID | EmpName    | Department | City   |
|-------|------------|------------|--------|
| 2     | Ravi Kumar | IT         | Mumbai |

**Query 5: Display employees whose city starts with any character and then 'e'**

```
SELECT * FROM Employees WHERE City LIKE '_e%';
```

**Output:**

| EmpID | EmpName      | Department | City  |
|-------|--------------|------------|-------|
| 1     | Amit Sharma  | HR         | Delhi |
| 4     | Reena Kapoor | IT         | Delhi |

### Query 6: Display employees whose name does not contain the letter 'a'

```
SELECT * FROM Employees WHERE EmpName NOT LIKE '%a%';
```

#### Output:

| EmpID | EmpName     | Department | City    |
|-------|-------------|------------|---------|
| 6     | Rohit Singh | Finance    | Kolkata |

### Additional LIKE Queries

#### Query 7: Display employees whose name ends with the letter 'a'

```
SELECT * FROM Employees WHERE EmpName LIKE '%a';
```

#### Output:

| EmpID | EmpName     | Department | City    |
|-------|-------------|------------|---------|
| 1     | Amit Sharma | HR         | Delhi   |
| 3     | Anita Verma | Finance    | Pune    |
| 5     | Aman Gupta  | Admin      | Chennai |

#### Query 8: Display employees whose last name starts with 'K'

```
SELECT * FROM Employees WHERE EmpName LIKE '% K%';
```

#### Output:

| EmpID | EmpName      | Department | City   |
|-------|--------------|------------|--------|
| 2     | Ravi Kumar   | IT         | Mumbai |
| 4     | Reena Kapoor | IT         | Delhi  |

**Query 9: Display employees whose City contains the letter 'n'**

```
SELECT * FROM Employees WHERE City LIKE '%n%';
```

**Output:**

| EmpID | EmpName     | Department | City    |
|-------|-------------|------------|---------|
| 3     | Anita Verma | Finance    | Pune    |
| 5     | Aman Gupta  | Admin      | Chennai |

**Query 10: Display employees whose department does NOT start with 'F'**

```
SELECT * FROM Employees WHERE Department NOT LIKE 'F%';
```

**Output:**

| EmpID | EmpName      | Department | City    |
|-------|--------------|------------|---------|
| 1     | Amit Sharma  | HR         | Delhi   |
| 2     | Ravi Kumar   | IT         | Mumbai  |
| 4     | Reena Kapoor | IT         | Delhi   |
| 5     | Aman Gupta   | Admin      | Chennai |

**Query 11: Display employees whose name has exactly 'ee' as the second and third characters**

```
SELECT * FROM Employees WHERE EmpName LIKE '_ee%';
```

**Output:**

| EmpID | EmpName      | Department | City  |
|-------|--------------|------------|-------|
| 4     | Reena Kapoor | IT         | Delhi |

## Pattern Variations

### Query 12: Names ending with a specific letter ('i' in first name)

```
SELECT * FROM Employees WHERE EmpName LIKE '%i %';
```

#### Output:

| EmpID            | EmpName | Department | City |
|------------------|---------|------------|------|
| No records found |         |            |      |

### Query 13: Names starting with a specific letter ('R')

```
SELECT * FROM Employees WHERE EmpName LIKE 'R%';
```

#### Output:

| EmpID | EmpName      | Department | City    |
|-------|--------------|------------|---------|
| 2     | Ravi Kumar   | IT         | Mumbai  |
| 4     | Reena Kapoor | IT         | Delhi   |
| 6     | Rohit Singh  | Finance    | Kolkata |

### Query 14: Names containing certain letters ('m' anywhere in the name)

```
SELECT * FROM Employees WHERE EmpName LIKE '%m%';
```

#### Output:

| EmpID | EmpName     | Department | City    |
|-------|-------------|------------|---------|
| 1     | Amit Sharma | HR         | Delhi   |
| 2     | Ravi Kumar  | IT         | Mumbai  |
| 3     | Anita Verma | Finance    | Pune    |
| 5     | Aman Gupta  | Admin      | Chennai |

### Query 15: Names where the first name ends with 'a'

```
SELECT * FROM Employees WHERE EmpName LIKE '%a %';
```

#### Output:

| EmpID            | EmpName | Department | City |
|------------------|---------|------------|------|
| No records found |         |            |      |

### Query 16: Names starting with 'A' and ending with 'a'

```
SELECT * FROM Employees WHERE EmpName LIKE 'A%a';
```

#### Output:

| EmpID | EmpName     | Department | City    |
|-------|-------------|------------|---------|
| 1     | Amit Sharma | HR         | Delhi   |
| 3     | Anita Verma | Finance    | Pune    |
| 5     | Aman Gupta  | Admin      | Chennai |

### NOT LIKE Queries

### Query 17: Exclude employees whose name starts with the letter 'A'

```
SELECT * FROM Employees WHERE EmpName NOT LIKE 'A%';
```

#### Output:

| EmpID | EmpName      | Department | City    |
|-------|--------------|------------|---------|
| 2     | Ravi Kumar   | IT         | Mumbai  |
| 4     | Reena Kapoor | IT         | Delhi   |
| 6     | Rohit Singh  | Finance    | Kolkata |

**Query 18: Exclude employees whose city ends with 'i'**

```
SELECT * FROM Employees WHERE City NOT LIKE '%i';
```

**Output:**

| EmpID | EmpName     | Department | City    |
|-------|-------------|------------|---------|
| 3     | Anita Verma | Finance    | Pune    |
| 6     | Rohit Singh | Finance    | Kolkata |

**Query 19: Exclude employees whose department contains the letters 'in'**

```
SELECT * FROM Employees WHERE Department NOT LIKE '%in%';
```

**Output:**

| EmpID | EmpName      | Department | City   |
|-------|--------------|------------|--------|
| 1     | Amit Sharma  | HR         | Delhi  |
| 2     | Ravi Kumar   | IT         | Mumbai |
| 4     | Reena Kapoor | IT         | Delhi  |

**Query 20: Exclude employees whose name has 'm' as the second character**

```
SELECT * FROM Employees WHERE EmpName NOT LIKE '_m%';
```

**Output:**

| EmpID | EmpName      | Department | City    |
|-------|--------------|------------|---------|
| 2     | Ravi Kumar   | IT         | Mumbai  |
| 3     | Anita Verma  | Finance    | Pune    |
| 4     | Reena Kapoor | IT         | Delhi   |
| 6     | Rohit Singh  | Finance    | Kolkata |

**Query 21: Exclude employees whose city contains the letter 'e'**

```
SELECT * FROM Employees WHERE City NOT LIKE '%e%';
```

**Output:**

| EmpID | EmpName     | Department | City    |
|-------|-------------|------------|---------|
| 2     | Ravi Kumar  | IT         | Mumbai  |
| 6     | Rohit Singh | Finance    | Kolkata |

## Practical 6: INNER JOIN

---

*Practical 6 explores INNER JOIN operations to combine rows from two or more tables based on related columns. It demonstrates equi-joins between Employees and Departments tables using the DeptID foreign key relationship. The practical covers basic join syntax, selecting specific columns from joined tables, applying WHERE clauses to filter joined results, sorting joined output with ORDER BY, and combining JOIN with aggregate functions and GROUP BY. These operations are essential for working with normalized relational databases where data is distributed across multiple tables.*

### Table Setup

```
CREATE DATABASE IF NOT EXISTS prac6;
USE prac6;

DROP TABLE IF EXISTS Employees;
CREATE TABLE Employees(
    EmpID INT,
    EmpName VARCHAR(50),
    DeptID VARCHAR(10)
);

DROP TABLE IF EXISTS Departments;
CREATE TABLE Departments(
    DeptID VARCHAR(10),
    DeptName VARCHAR(30),
    Location VARCHAR(30)
);

INSERT INTO Departments VALUES('D001', 'IT', 'Delhi');
INSERT INTO Departments VALUES('D002', 'HR', 'Mumbai');
INSERT INTO Departments VALUES('D003', 'Finance', 'Delhi');
INSERT INTO Departments VALUES('D004', 'Admin', 'Bangalore');

INSERT INTO Employees VALUES(1, 'Amit Sharma', 'D001');
INSERT INTO Employees VALUES(2, 'Ravi Kumar', 'D002');
INSERT INTO Employees VALUES(3, 'Anita Verma', 'D001');
INSERT INTO Employees VALUES(4, 'Reena Kapoor', 'D003');
INSERT INTO Employees VALUES(5, 'Aman Gupta', 'D001');
INSERT INTO Employees VALUES(6, 'Rohit Singh', 'D004');
```

**Table 13 Departments Table Data**

| DeptID | DeptName | Location  |
|--------|----------|-----------|
| D001   | IT       | Delhi     |
| D002   | HR       | Mumbai    |
| D003   | Finance  | Delhi     |
| D004   | Admin    | Bangalore |

**Table 14 Employees Table Data**

| EmpID | EmpName      | DeptID |
|-------|--------------|--------|
| 1     | Amit Sharma  | D001   |
| 2     | Ravi Kumar   | D002   |
| 3     | Anita Verma  | D001   |
| 4     | Reena Kapoor | D003   |
| 5     | Aman Gupta   | D001   |
| 6     | Rohit Singh  | D004   |

## Queries and Outputs

### Query 1: Display employee names along with their department names

```
SELECT Employees.EmpName, Departments.DeptName
FROM Employees
INNER JOIN Departments
ON Employees.DeptID = Departments.DeptID;
```

#### Output:

| EmpName      | DeptName |
|--------------|----------|
| Amit Sharma  | IT       |
| Ravi Kumar   | HR       |
| Anita Verma  | IT       |
| Reena Kapoor | Finance  |
| Aman Gupta   | IT       |
| Rohit Singh  | Admin    |

### Query 2: Display employee names, department names, and locations

```
SELECT EmpName, DeptName, Location
FROM Employees INNER JOIN Departments
ON Employees.DeptID = Departments.DeptID;
```

#### Output:

| EmpName      | DeptName | Location  |
|--------------|----------|-----------|
| Amit Sharma  | IT       | Delhi     |
| Ravi Kumar   | HR       | Mumbai    |
| Anita Verma  | IT       | Delhi     |
| Reena Kapoor | Finance  | Delhi     |
| Aman Gupta   | IT       | Delhi     |
| Rohit Singh  | Admin    | Bangalore |

### Query 3: Display names of employees working in the 'IT' department

```
SELECT EmpName
FROM Employees INNER JOIN Departments
ON Employees.DeptID = Departments.DeptID
WHERE Departments.DeptName = 'IT';
```

#### Output:

| EmpName     |
|-------------|
| Amit Sharma |
| Anita Verma |
| Aman Gupta  |

### Query 4: Display names of employees and their department locations in 'Delhi'

```
SELECT EmpName, Location
FROM Employees INNER JOIN Departments
ON Employees.DeptID = Departments.DeptID
WHERE Departments.Location = 'Delhi';
```

#### Output:

| EmpName      | Location |
|--------------|----------|
| Amit Sharma  | Delhi    |
| Anita Verma  | Delhi    |
| Reena Kapoor | Delhi    |
| Aman Gupta   | Delhi    |

**Query 5: List employees and their department details for only matching DeptIDs**

```
SELECT *
FROM Employees INNER JOIN Departments
ON Employees.DeptID = Departments.DeptID;
```

**Output:**

| EmpID | EmpName      | DeptID | DeptName | Location  |
|-------|--------------|--------|----------|-----------|
| 1     | Amit Sharma  | D001   | IT       | Delhi     |
| 2     | Ravi Kumar   | D002   | HR       | Mumbai    |
| 3     | Anita Verma  | D001   | IT       | Delhi     |
| 4     | Reena Kapoor | D003   | Finance  | Delhi     |
| 5     | Aman Gupta   | D001   | IT       | Delhi     |
| 6     | Rohit Singh  | D004   | Admin    | Bangalore |

**Query 6: Display employee ID, name, department, and location ordered by department**

```
SELECT Employees.EmpID, Employees.EmpName, Departments.DeptName,
Departments.Location
FROM Employees INNER JOIN Departments
ON Employees.DeptID = Departments.DeptID
ORDER BY Departments.DeptName;
```

**Output:**

| EmpID | EmpName      | DeptName | Location  |
|-------|--------------|----------|-----------|
| 6     | Rohit Singh  | Admin    | Bangalore |
| 4     | Reena Kapoor | Finance  | Delhi     |
| 2     | Ravi Kumar   | HR       | Mumbai    |
| 1     | Amit Sharma  | IT       | Delhi     |
| 3     | Anita Verma  | IT       | Delhi     |
| 5     | Aman Gupta   | IT       | Delhi     |

**Query 7: Display employees from Delhi with their ID, name, and department**

```
SELECT      Employees.EmpID,      Employees.EmpName,      Departments.DeptName,
Departments.Location
FROM Employees INNER JOIN Departments
ON Employees.DeptID = Departments.DeptID
WHERE Departments.Location = 'Delhi';
```

**Output:**

| EmpID | EmpName      | DeptName | Location |
|-------|--------------|----------|----------|
| 1     | Amit Sharma  | IT       | Delhi    |
| 3     | Anita Verma  | IT       | Delhi    |
| 4     | Reena Kapoor | Finance  | Delhi    |
| 5     | Aman Gupta   | IT       | Delhi    |

**Query 8: Display count of employees per department with department name and location**

```
SELECT Departments.DeptName, Departments.Location, COUNT(Employees.EmpID) AS
EmployeeCount
FROM Employees INNER JOIN Departments
ON Employees.DeptID = Departments.DeptID
GROUP BY Departments.DeptID, Departments.DeptName, Departments.Location;
```

**Output:**

| DeptName | Location  | EmployeeCount |
|----------|-----------|---------------|
| IT       | Delhi     | 3             |
| HR       | Mumbai    | 1             |
| Finance  | Delhi     | 1             |
| Admin    | Bangalore | 1             |
